

Ziad Fayez Mahmoud

Fullstack Developer Node.js / NestJS & Next.js / React

📍 Giza, Egypt 🛡 Military Status: Completed ✉ ziadfayezmahmoud@gmail.com ☎ +20115392185
🐙 github.com/Ziad 💼 LinkedIn.com/Ziad 🌐 Portfolio

PROFILE

Fullstack Developer with over a year of remote experience building production-level platforms for clients in Saudi Arabia, including a food-ordering marketplace and a multi-dashboard car-booking system. Also built E-Shop, a personal fullstack e-commerce platform (NestJS + Next.js) with a live admin dashboard, end-to-end auth, and Stripe payments. Works across the stack — designing secure authentication (JWT, OAuth), integrating payments (Stripe, PayPal, MyFatoorah), and building the APIs and UIs that connect them. Comfortable owning a feature end-to-end, from database schema to the interface a user actually touches

EDUCATION

Bachelor's degree in Computers and Artificial intelligence 09/2019 – 06/2023
Helwan University Cairo, Egypt

PROFESSIONAL EXPERIENCE

Backend Developer (Freelance, Team Member) 06/2025 – 05/2026
Contributed as a backend developer in a freelancing team working on two Remote (Saudi Arabia)
production-level applications for Saudi clients.

InBajasat – Food Ordering Platform

<https://github.com/Ziad2019/Inbajasat> 🌐

- Built and maintained backend systems for **two mobile apps** (Customer & Chef).
- Developed **secure authentication and authorization** using **OAuth (Google, Facebook, Apple)** and **JWT**.
- Integrated **PayPal** for digital payments and used **AWS S3** for image uploads and management.
- Designed APIs for **user profiles, order management, menus, reviews, and notifications**.
- Ensured **data validation, error handling, and role-based access control** for all endpoints.
- Collaborated with frontend and mobile developers to deliver well-documented, scalable APIs.

Transport – Car Booking Platform

<https://github.com/Ziad2019/Transport> 🌐

- Developed backend services for a **multi-dashboard system** (Customer App, Admin Dashboard, and Provider Dashboard).
- Designed APIs for **car booking, trip scheduling, and driver management**.
- Implemented **MyFatoorah** payment integration and used **AWS S3** for media uploads.
- Developed authentication and role-based access between different dashboards (Admin, Provider, Client).
- Focused on performance optimization, database consistency, and seamless communication between services via **NestJS, TypeScript, and MongoDB**.

Backend Developer Intern — The Baker (Online)

04/2025 – 06/2025
Remote

Completed an online internship focused on backend development using Node.js

- Built and tested RESTful APIs with **MongoDB** integration.
- Worked on **authentication, authorization, and secure route handling** using **JWT** and **Bcrypt**.
- Enhanced understanding of API architecture, scalability, and security best practices.

PROJECTS

E-Shop — Fullstack E-commerce Platform

NestJS, Next.js, TypeScript, MongoDB, Mongoose, Stripe API, JWT (access/refresh + Google OAuth), bcrypt, Multer, Sharp, Tailwind CSS, Zustand, Framer Motion, React Query

Demo-<https://e-shop-frontend-48s8.vercel.app/> 

- Built a complete fullstack e-commerce platform: a modular NestJS backend paired with a Next.js frontend, covering customer storefront, checkout, and an admin dashboard.
- Designed a multi-strategy authentication system with Passport.js (JWT access/refresh tokens with rotation and reuse detection, plus Google OAuth), enforced through global guards and role-based access control (user, admin).
- Built an admin dashboard for managing products, orders, and users — covering full CRUD on the product catalog, order status tracking and updates, and user role/account management, all gated behind admin-only guards.
- Built the Next.js client integration layer, including an Axios instance with JWT-based request/response interceptors and a structured API service layer shared across the storefront and admin views.
- Implemented modular backend features including product catalog, categories, shopping cart, orders, and payment processing, integrated with the Stripe API.
- Managed file uploads and image optimization using Multer and Sharp.
- Documented all APIs with Swagger/Postman for clear, interactive reference.

SKILLS

Programming Languages

- JavaScript (ES6+), TypeScript, HTML, CSS

Backend Development

- Node.js, Express.js, NestJS, REST API, GraphQL, Microservices, Unit Testing (Jest)

Frontend Development

- React, Next.js, Tailwind CSS, Redux Toolkit, Zustand, React Query, Framer Motion,

Databases

- MongoDB, PostgreSQL, TypeORM, Mongoose, Prisma

Security

- JWT, OAuth (Google, Facebook, Apple), Passport.js, Bcrypt, Helmet, XSS Protection, Rate Limiting

Payments & Storage

Stripe, PayPal, MyFatoorah, AWS S3, Cloudinary

DevOps & Tools

- Git, GitHub, Docker, Postman, Swagger, Vercel, Railway, AI-Assisted Development (Claude)

Computer Science

- Data Structures, Algorithms, Design Patterns, SOLID Principles

Soft Skills

- Team Collaboration, Problem Solving, Adaptability, Fast Learning, Communication

LANGUAGES

Arabic

English
